Bell Techlogix and Actsoft Cement Powerful Partnership

Mobile Enterprise Software Veteran Marries up with Rugged Hardware Device

INDIANAPOLIS, IN and TAMPA, FL - Bell Techlogix, the exclusive U.S. distributor of the EnterMoCase™ recently completed successful integration with Actsoft Inc., an industry leader in Mobile Resource Management software development and application. The strategic partnership provides powerful mobile solutions for transportation, logistics management and field force automation across multiple vertical markets.

The EnterMoCase™ is a ruggedized smartphone enclosure. When integrated with the power of a BlackBerry® smartphone and Actsoft software, the single device gives mobile workers the ability to collect and transmit valuable data over any wireless network via barcode scanning with remote signature capture. The EnterMoCase™ also includes an extended power management system, making battery-life challenges a thing of the past.

“We have already received significant interest and extremely positive responses from organizations of all sizes across the country. Extending to mobile workers the ability to now leverage the power of the BlackBerry® smartphone and the Actsoft application suite in environments requiring ruggedized protection has generated significant opportunities,” said Don Imaizumi, Senior Vice President of Business Development with Bell Techlogix.

Actsoft leverages the latest advances in GPS, mobile and web technologies, giving enterprise customers a deliberate level of control over their entire business. Enhanced workforce and asset utilization provides companies more control over operating costs. In addition, the ability to immediately locate assets and employees considerably mitigates risk. Simply reducing paperwork and the errors associated with manual data entry are two very tangible by-products. By increasing the efficiency of data collection and transfer, positive bottom line results are often realized immediately.

Kevin Thigpen, Actsoft’s Executive Vice President adds “We are extremely excited about integrating our software with the EnterMoCase™. Offering organizations a ruggedized BlackBerry® solution is just one more way for our customers to streamline processes and ensure ROI.”

Bell Techlogix and Actsoft have successfully placed a number of EnterMoCase™ devices, integrated with Actsoft software, into live production environments. The feedback is nothing but positive.
